Quick Overview

Repellex® Systemic Tablets is a revolutionary new product that has quickly become our #1 seller. This exclusive patented formula changes the way we protect our plants from browsing animals. It delivers a hot pepper concentrate through plant roots at the molecular level, making the plants inedible to animals. Because the active compound is protected inside the plant cells, it doesn't wash off in the rain or degrade in sunlight. One treatment typically lasts the entire growing season. Efficacy is greatly improved because the compound maintains its potency and is evenly distributed throughout the plant. The natural pepper extract is very safe and very effective.

And the best part? You can say good-bye to messy mixes and stinky sprays. These easy-to-use tablets are pre-measured and require no mixing or spraying. Just place tablets into the soil, water in, and walk away! Protecting plants from hungry animals has never been easier.

Not intended for use on edible plants.
Currently not available for purchase in California

Additional Information

Where to Apply	Trees & Shrubs, Foliage Plants, Flowers
When to Apply	Apply when planting. For established plants, use any time after new growth appears. Do not apply when plant is dormant or when soil is waterlogged or frozen. (These conditions inhibit uptake into the plant).
How Long it Lasts	Up to 1 year
How to Apply	Place tablets in soil or growing medium of plant. Position 2-3 inches away from root crown, and push 1-3 inches below the soil surface. When more than one tablet is applied at once, evenly space them around the plant. Activate the application with irrigat
Formula	Ready-to-Use Tablet
Coverage	Varies with plant size. Apply 1 tablet per every foot of plant height and width (height + width). Click here for rate table.
Size of Container	50 tablets
Active Ingredients	Capsaicin
Tips and Info	Water dissolves this product in soil, where it is absorbed by roots and moves up through the plant. For complete results, the repellent must distribute throughout the plant. Depending on the size and health of the plant, this may take one week to one month (for very large plants). To protect plants during uptake, treat with a foliar spray such as Repellex® Deer & Rabbit Repellent.
